JAN 29 1858
J. J. REED, D.D.

You are requested to preserve this Pamphlet, and give the information to your friends, that CANCEROUS diseases and TUMORS can be cured without the use of the knife, and with but little, if any pain.

ELKTON, OREGON, OCT. 16, 1858.

I, the subscriber, have been afflicted with cancer on the right side of the face, for the past three years, and employed many so-called cancer-doctors, which caused a great amount of suffering for many months, without affording any relief.

At this stage of the disease, I heard of, and employed, Dr. Blake, who perfectly destroyed the life of the cancer in fifty minutes. It was all out and soundly healed in three weeks. The application was attended with little or no pain.

I would advise all physicians to become acquainted with Dr. B.'s mode of treating this most fearful of all diseases, as it is, in my opinion, the only treatment which any conscientious physician would recommend after becoming acquainted with it.

The Dr. also gave me constitutional treatment which appeared to cleanse my blood from cancerous humor, and restored me to good health.

During the above three weeks I conversed with many of Dr. B.'s patients, all of whom were doing well, and seemed much pleased with him in all respects.

GIDEON LANGDON.

READ AND CONSIDER.

The following pages are devoted to the testimony of those who have availed themselves of my treatment of Cancer.

Any treatment of disease that claims to be in advance of what is known to the profession, however clearly on scientific principles, or uniformly commended by its power to heal, is sure to meet with opposition. In the treatment of Cancer this is the more to be expected, inasmuch as Cancer has been the opprobrium of the profession. By physicians, the world over, it has for the most part been regarded as incurable. If this is not so, why the conviction universally pervading the public mind, that all ordinary means to arrest it are impotent?

No better evidence of this fact can be adduced than that the announcement to a patient, that the disease is Cancer, always and inevitably shocks to depression the nervous system.

The surgeon's knife that promised to be the forlorn hope at least, has demonstrated itself from years of trial so incompetent to cure that no one now expects, from its use, any thing more than a respite from an impending doom, and hence it is turned from with mingled dread and despair.

Appropriate indeed is the language of Dr. Good, to the treatment of this most terrible disease, "The practise is melancholy from the first. The die is cast, almost if not altogether irrecoverably; and all we can hope to accomplish is to postpone the fatal result; to mitigate the sufferings of to-day, and soften the passage of the tomb."

To those afflicted with Cancer, I have more encouragement to give. By a perusal of the following pages, they will see, I claim to have discovered a remedy for the disease, that the cures effected by it have been thorough; no return of the Cancer having ever been known.

Having proved it by twelve years of trial, I commend it with confidence to the suffering.

It was with the urgent solicitation of my friends, and many neighboring physicians that I consented to publish this pamphlet, and give the public information in relation to the remedy.

Those who have witnessed its application—physicians, clergymen, and friends, are united in their testimony that it is truly a wonderful remedy. Judging testimonials of character worth most, from those who know me best; I have referred to individuals among whom I have lived, who know my life as an individual and physician, as well as the reputation I have acquired for curing Cancer, for many years past.

THE REMEDY .

This remedy excels all others in the following particulars—

1st. The slight pain—and in many cases none—which it produces. The majority of my operations are attended with no pain at all, only a slightly warm sensation, which is compared by most of my patients to the heat of the sun on a warm summer's day.

2d. *The Rapidity of its Operation.* The time occupied in my individual operation varies from fifteen to sixty minutes—the patient generally conversing as usual. I have destroyed many Cancers of over an inch in depth in fifty, and in one instance in twenty-five minutes. This is one of the best features of my remedy, for it is on account of the slowness of their operation that most of the so-called Cancer remedies fail to produce the desired effect. Cancers if cured at all, must be cured quickly; by so doing that slow and fatal irritation is avoided which attends the application of all the Cancer remedies used by others. Slowness of operation and severity of pain have been, and still are, the principal objections made by the faculty against the so-called remedies, fortunately mine is not guilty of either.

3d. *The Time occupied in Healing.* This varies from three to ten weeks, according to the health and age of the patient, and the size of the Cancer.

4th. *The amount of Discharge Produced.* This commences in a few days after the operation, and continues abundant until the cancerous degeneration is wholly removed.

5th. *The slight surrounding Inflammation and Swelling which it produces.* This is hardly perceptible. There is just enough to produce a sufficient discharge and healthy granulation. The inflammation and swelling produced by most Cancer remedies, causes more pain and suffering, if possible, than the first application.

6th. *There is no Danger from taking cold.* The patient can generally pursue his usual business during the cure, and is as free from pain and suffering in a few minutes after the operation as before.

7th. *There is no Draught upon the Constitution, and no Shock to the Nervous System.* The pulse of the patient is not even quickened during the operation. My patients often improve much in health and spirits before the healing process is completed. In all cases where it is necessary, I give medicine to cleanse the blood and eradicate the Cancerous poison from the system. I consider this of the greatest importance in many cases.

8th. *The Completeness of the Cure.* No Cancer cured by this remedy has been known to return.

9th. This remedy is purely vegetable, and contains no poisonous principles whatever.

10th. *Its operation is not confined to Cancers.* I remove wens, moles, birth marks, tumors of various kinds, and other similar difficulties, with but little pain, and in many instances the pain is so slight that the operation is performed without the knowledge of the patient.

After taking the above advantages of my remedy into consideration, I think no one will have any hesitation in saying, that it is truly one of the most remarkable discoveries of the age, and will be, if properly used, the great and only Cancer Remedy of the world.

A friend of mine, Mr. Wm. J. Buck, New York City, on returning from an operation which he had witnessed, said to me, "The truth in relation to your remedy and its operation, is too much to

tell. It is a remedy of inestimable value, and should be made known to the world." So all have said who have witnessed its application.

The following Certificates are from a few of many persons I have cured. Please read their statements in relation to the remedy and its operation. I could procure many more testimonials and certificates in relation to my remedy and cures, but these, I think, are sufficient to satisfy any one who has independence of character, and thinks for himself, that it is of inestimable value, and deserves the attention and patronage of all who are afflicted with Cancer in any of its forms.

TESTIMONIALS.

Raritan, Oct. 13th, 1855.

I take pleasure in acceding to Dr. Blake's request, that I would make a statement of what his remedy has done in my case. I had been afflicted with Cancer in the Breast for three years, when I was recommended by my attending Physician to apply to him.

He entirely destroyed the Cancer in fifty-five minutes, with but little pain.

At the expiration of ten days the Cancer came out, leaving a perfectly healthy surface, and was entirely well in five weeks.

Drs. Edwards and Tunison were present, and highly approved of the operation. I have known of Dr. Blake operating upon a number of Cancers, some in my immediate neighborhood, all of which are now perfectly well. I would recommend all afflicted, as I have been, to apply to Dr. Blake, and hope they will lose no time in availing themselves of his service.

MRS. ASA R. DILTS.

Flemington, N. J., Oct. 24, 1855.

For the benefit of those afflicted, I do hereby certify, that I had a Cancer on my lip for eighteen months, which my attending Physician wished to remove with a knife, but I did not comply with his request, fearing not only the pain, but that it would return in a short time, and be as bad or worse than ever. At this time I was advised by my friends to apply to Dr. Blake, which I did, and was well in a few weeks after the application of his remedy, without suffering any pain.

I now feel under great obligations to my friends for their truly friendly advice. The remedy was only forty minutes in destroying

the Cancer, so that Dr. Blake passed a sharp instrument through it without causing any pain. Dr. Blake's remedy is truly wonderful, on account of the rapidity and ease of its operation, doing as much in a few minutes, without pain, as any other I ever heard of can do in several weeks.

MRS. ABRAM FULPER.

Flemington, N. J., Nov. 5th, 1855.

DR. BLAKE—*Dear Sir*—The Cancer on my lip, which you operated on last Spring, was entirely well in a few weeks. I had been afflicted with it many years, and feel very thankful that I am relieved from that dreadful disease which, had it not been for the timely application of your remedy, would in time have destroyed my life. I had employed several physicians, and was under the care of one six months, during which time he operated on me several times, which caused me a great amount of suffering, and at the expiration of the six months I thought it advisable to discontinue the treatment.

Had I employed you many years before, I should have been relieved of as many years of mental and physical suffering. I hope that you will be as successful in all other cases which you undertake as you have been with mine. All the other patients on which you have operated in this neighborhood, are also well.

MRS. RACHEL REED.

The above Cancer was considered past cure by all who had seen it previous to the operation, but fortunately they were mistaken and happily disappointed.

New Germantown, Sept. 30th, 1855.

I, the subscriber, had a very bad Cancer on my under lip, which had been removed three times with the knife; the last time by Dr. Valentine Mott, New York City. But notwithstanding it returned again. My lip was drawn so tightly across my teeth that it was with great difficulty I could speak. Dr. Blake cured the Cancer in three weeks, and also released the tightness so that I now have no difficulty in talking. I take great pleasure in announcing to the public this wonderful cure, and hope that all who are afflicted with Cancer, *instead of resorting to the knife*, will apply to Dr. Blake.

JOHN P. HOFFMAN.

The above certificate is sufficient to satisfy any one of the superiority of my remedy over the knife.

G. T. B.

Lebanon, Oct. 17th, 1855.

To whom it may concern.—This certifies that I, the subscriber, had a Cancer the size of a chestnut on my nose, near the corner of my eye. It had been there ten years. For the last six months it had increased very rapidly, and had become very painful. At this time I secured the services of Dr. G. T. Blake, who entirely destroyed the Cancer in forty minutes. At the expiration of this time Dr. Blake passed a sharp instrument in two directions through the Cancer, without my feeling it.

I experienced no pain at all during the operation, and could have gone to sleep at any time, so perfectly painless was the remedy. I am now well.

JOHN EVERITT.

The above-mentioned Cancer had been open and discharged for six months.

G. T. B.

We, the undersigned, take pleasure in advising all afflicted with that dreadful disease, Cancer, to avoid the knife, a most painful and uncertain remedy, and have recourse without delay to Dr. Blake, who will entirely cure them in a short time, with little, and in many instances, no pain.

We all speak from personal experience, having been ourselves relieved from Cancers by the application of his truly invaluable remedy.

This remedy speaks for itself, and will not disappoint, like other Cancer remedies, those wise enough to apply in season to Dr. Blake.

Lydia Hiner, Little York, Warren Co., N. J.

The scar disappears, in most instances, in a short time after healing. It is very difficult to discover it on those whom I operated upon six months ago. I, yesterday, (Dec. 11,) saw a patient on whom I operated four weeks ago; the scar is now hardly perceptible.

Lebanon, Hunterdon Co., N. J., Nov. 6th 1855.

This certifies that my daughter, ten years of age, had a very unpleasant-looking birth-mark on her face. It was one inch and a half long and three-fourths of an inch wide, covered with dark-colored hair, and constantly increasing in size. We were fearful it would injure the appearance of our daughter very much.

Dr. Blake removed it last spring in twenty-five minutes, without causing any pain. She laughed most of the twenty-five minutes. We are highly pleased with the change in her appearance.

WILLIAM EICK.

Somerville, Oct. 13th, 1855.

I, the subscriber, had a child, eighteen months old, with a large, red, elevated mark on the left cheek, which I was fearful would become cancerous. Dr. Blake removed it in twenty-five minutes from the time the medicine was applied, without the least pain. It had previously been burnt out with caustic, but it returned.

J. V. TRUMP.

The following is from a very respectable Physician, well acquainted with the nature and treatment of Cancer.

TO THE AFFLICTED.

Raritan, Oct. 16th, 1855.

I do hereby certify that I have witnessed the application of Dr. G. T. Blake's celebrated Remedy for the eradication and complete cure of cancerous affections; and judging from what I have seen of its curative powers in some bad forms of that malignant and alarming disease in my practice, I can cheerfully say I believe it adequate to the cure of that disease, as much or more so than the knife, and has the advantage of being more speedy and attended with less pain than perhaps any other remedy known to the medical profession; and lodged as it is in the hands of Dr. Blake, a gentleman of acknowledged ability and skill as a Physician, I can recommend him to the confidence of the afflicted.

JN F. EDWARDS, M. D.

The following is from Dr. W. W. Hedges, who has been in the practice of medicine over forty years, and has seen a great many Cancers.

Chester, N. J., Oct. 30th, 1855.

This certifies that I witnessed an operation of Dr. G. T. Blake's Cancer Remedy upon a Cancer about the size of a chestnut, attend-

ed with constant burning and shooting pain of six or eight years standing, and for the last six months had ulcerated and discharged.

The Remedy was applied for about forty minutes without giving any pain; but on the contrary, the patient expressed himself relieved, soon after the Remedy was applied, of the constant pain which he had suffered. This feature alone, without considering its other advantages, must convince people of its superiority over the painful, cruel, and in some instances, barbarous use of the knife. At the expiration of the above-mentioned time, the Remedy was removed, and about half the Cancer came off with it. At the request of Dr. Blake, I passed a sharp instrument deep into the remaining portion of the Cancer, without producing any pain. The cure was complete in a few weeks.

Dr. Blake is a neighboring Physician, and I know him to be a man of good standing, both in and out of his profession, and I would earnestly recommend all who are afflicted with Cancer to avail themselves of his Remedy and operation, rather than undergo the many painful and tedious operations of the so-called Cancer doctors, who, in most instances, are non-professional men, and know nothing of the nature, growth, varieties, &c., of the disease they pretend to cure.

WM. W. HEDGES, M. D.

The following is from Rev. J. C. Duy, Pastor of the Lutheran Church, New Germantown, Hunterdon Co., New Jersey:

This may certify that I have been well acquainted with Dr. Blake for two years; that he is a near neighbor of mine, and my family Physician. His practice in this region of country is extensive, and he enjoys, in an eminent degree, the esteem and confidence of the community.

His remedy for Cancer is a remarkable medicine. It effects an entire, safe, speedy, and easy cure of this justly dreaded disease. In most cases, Cancers are completely removed with little or no pain to the patient. A sincere desire to be instrumental in relieving the sufferings of the afflicted, leads me earnestly to recommend all concerned to Dr. B., persuaded that they will find speedy relief. I may add that the Dr. makes no charge for advice.

Oct. 24th, 1855.

J. C. DUY.

The following is from Rev. C. Wood, former Pastor of Presbyterian Church, Fairmount, New Jersey:

Flemington, Oct. 20th, 1855.

DR. BLAKE—*My Dear Sir*—I have had the pleasure of meeting within the past ten months with several persons who have been entirely cured of cancerous affections by your mode of treatment.

But until now did not deem it proper to give public testimony to your success. Having within the past twenty-four hours met with a lady, cured of a Cancer of several years standing by your remedy, I felt that it was not only due to yourself but to suffering humanity, that your great success should be made known. The only difficulty I feel in the case, arises from the fear that if I should state *all I know* to be *true*, my object would be defeated. For truth is sometimes stranger than fiction. And yet I can testify from observation and personal acquaintance with some of your patients, that your remedy for the removal of this insidious and fatal disease is truly wonderful. I am credibly informed that *very slight* pain accompanies your application, in many cases none at all. That the wound heals *rapidly*, and unlike all other remedies it causes *no inflammation* and *no* swelling about the parts diseased. I understand that you engage to do in fifty minutes what other remedies require four weeks to effect.

This fact alone, apart from the consideration that your remedy is complete, that it gives no pain, and that no case has returned under your mode of treatment within the past ten years, ought to remove every fear from the mind of the sufferer, and encourage him to apply to you without delay.

Having served in my family as Physician during a part of my ministry, when affliction pressed most heavily upon us, I can and do most cheerfully bear testimony to your skill and success as a regular Physician, and to your conduct as a gentleman and upright man.

If you feel disposed to do so, you are at liberty to use this hasty note in whatever way you please to promote your interest, while saving multitudes from a loathsome and untimely death.

Yours, very respectfully,

CHARLES WOOD.

The following is from Rev. John L. Janeway, Pastor of Presbyterian Church, Flemington, Hunterdon Co., N. J.:

I have been acquainted with Geo. T. Blake for some time past, and can certify to his having been regularly graduated at the New York Medical University, and that he has been licensed by the State Medical Society to practice as a Physician in this State. I believe him to be skillful in his profession, and can cheerfully testify to his correct moral deportment.

JNO. L. JANEWAY.

Flemington, N. J.

The following is from Rev. W. W. Christine, Pastor of M. E. Church, Cokesbury, Hunterdon Co., N. J.:

I take pleasure in certifying that I have known Dr. G. T. Blake

for the last sixteen months, that he is a regular Physician, and has been my family physician during the above-mentioned time. His reputation is established in this section as a skillful and successful practitioner in the healing art; and in the destroying and curing of Cancers, I believe he has no rival.

Through his kindness I was permitted to witness the operation of his remedy on two Cancers, on the face of Mrs. H——, a very aged lady. I had seen caustics applied on the face of a mother for the curing of a Cancer, and had seen her agony, and yet all to no purpose. I was, therefore, the more desirous of witnessing the operation of Dr. Blake's Remedy. The ointment was applied, and it remained on some forty minutes, during which time I conversed with the lady and made particular inquiry if the remedy was painful? She answered, "It is not, but it has an itching or smarting sensation."

She then informed me, that she had endured an extremely painful operation on one of those Cancers some years since, under the direction of another physician, but this was nothing compared with that. At the expiration of forty minutes, the ointment was removed, and a fine needle punctured the now dead Cancer to the depth of a quarter of an inch, to convince us that the painless but certain destruction of the Cancer was complete.

I visited the lady quite frequently, until the sores were healed, which was about nine weeks. So far as I can judge, the cure was perfect and entire. With the knowledge of this case, and two other neighbors of mine, cured by Dr. Blake's Remedy, I believe it to be superior to all other remedies, and that it will accomplish as much in fifty minutes, with little or no pain, as others will in four or five weeks with great pain. This remedy produced no swelling or surrounding inflammation in the above case. I am informed there is no danger of taking cold. Ye hitherto hopeless sufferers, give not up to despair. There is a remedy without the knife, and without painful cauterization.

W. WILLIAMS CHRISTINE.

Nov. 8th, 1855.

The following is from Rev. H. M. Brown, Pastor of M. E. Church, Mendham, New Jersey:

To all whom it may Concern.

I take pleasure in stating that I have entire confidence in Geo. T. Blake, M. D., as a skillful Physician, he having prescribed for my family to the satisfaction of all concerned. I deem it a duty as well as a privilege to say that in my judgment Dr. Blake is every way worthy of public consideration and confidence.

H. M. BROWN.

Lebanon, Hunterdon Co., N. J., Oct. 14th, 1856.

This is to certify, that my wife had a cancer on her arm, which had been growing for several years, attended at times with an itching, stinging pain. It increased in size, and the pain, at times, was quite severe. Dr. G. T. Blake was called upon, who entirely removed the cancer in thirty minutes, and in a manner without pain. It readily healed up in the course of a few weeks. It is now sixteen months since the operation. I consider it entirely cured and certain not to return.

I would recommend all those that are afflicted with cancers to consult Dr. Blake, as his cure is certain, and is attended with scarcely any pain. I, of my own personal knowledge, know and have seen a number of persons that he has operated upon, and all consider themselves cured; *a part of them had been operated upon by other Physicians, and given up as incurable.*

JOHN R. KLINE.

The following is from Mr. J. L. Crowley, editor of the *Elizabeth Tribune*:

Elizabeth, N. J., Dec. 10th, 1856.

Having witnessed in this city, on the 1st inst., an operation of Dr. G. T. Blake's Remedy for the Cure of a Cancerous Affection, I deem it both a pleasure and a duty to make public my observations and impressions in relation thereto.

The case was that of a lady aged about 25 years, apparently in good health. The part affected was the right breast, about three inches above the nipple, outside the gland, in the direction of the arm-pit. The symptoms of cancer as described by herself were itching and smarting, accompanied at times by crawling sensations, and at others by sharp, shooting pains. Within a few days previous to the operation, she experienced very violent pains, and on two successive nights was awakened from sound sleeps in consequence of the severe pains. Externally, the cancer had somewhat the appearance of a bile in its incipient stages; to the touch, it appeared to be about the size of a large chestnut. The patient said that once or twice a scaly substance had dropped off from the point of the cancer. Dr. Blake applied his remedy to the cancerous part—a circle about the size of a shilling piece—and in forty-five minutes from the time of application the cancer was effectually destroyed, so that the passage of a large needle into the dead flesh, to the depth of three-quarters of an inch (actual measurement) gave not the slightest pain to the patient. During the operation, the patient repeatedly expressed herself in reply to inquiries, as experiencing scarcely any pain from the effects of the remedy, and the pain produced by the

cancer was sensibly lessened from the time the remedy began to operate. No inflammation, and but very little irritation was apparent about the parts contiguous to the cancer after the removal of the application. I have thus given a plain statement of the symptoms of this case, and the effect of Dr. Blake's Remedy. My impression in regard to the remedy is, that it is painless, safe, sure, and speedy, and as much superior to the barbarous knife system as the railroad-car is to the old-fashioned, lumbering stage-coach. To say the least, the operation of the remedy was truly wonderful, and its virtues should be widely known.

J. L. CROWLEY.

The following is from D. E. Smith, M.D., who is engaged in an extensive practice of medicine in Brooklyn, Long Island. He is also well known in many parts of New Jersey :

Brooklyn, L. I., Nov. 12th, 1856.

DR. BLAKE—Permit me to express to you my entire satisfaction in the operation of your Cancer Remedy. Having had ocular proof at two different successful applications on my own patients, and from the quickness of the operation, the comparative freedom from pain, and the completeness of the cure, I am free to acknowledge that in those cases, at least, it has accomplished all that you claim for it. I would unhesitatingly recommend all who are suffering from this truly dreadful disease to apply your remedy at once, especially in the incipient or forming stage.

Very truly yours,

D. E. SMITH, M.D.

Allentown, N. J., Nov. 11, 1856.

DR. G. T. BLAKE—*Dear Sir*—At your request, I will cheerfully certify my confidence in the efficacy of your Cancer Remedy, having tried it myself with success, and witnessed its happy effects on others. I feel prepared to recommend it to all afflicted with that dreadful disease, confident that if applied in the early stage it will prove effectual.

Yours, truly,

WM. FOSTER.

Croton, Hunterdon Co., New Jersey, Sept. 3, 1856.

I, the subscriber, had a red spot growing on my face for four years. My physician told me it was a cancer. Dr. G. T. Blake's Remedy was applied twenty-eight minutes. It was well in five weeks. I have attended to my usual duties all the time with but little inconvenience.

MARY BEARDER.

Croton, Hunterdon Co., N. J., Sept. 3, 1856.

I hereby certify that I had a lump growing on my face for several years. I was told by my neighbors that it was a cancer. Also, two physicians, whom I consulted, told me the same thing, and advised me to employ Dr. Blake. I did so. The operation lasted thirty-five minutes, with but very little pain. It healed in five or six weeks. I am now perfectly well. I would say to those who have cancers, apply to Dr. Blake, as I believe his to be the easiest and most successful remedy known.

GEO. T. BEARDER.

Mendham, Morris Co., N. J., Nov. 5, 1856.

This certifies that I have been afflicted with Cancer for two years and a half, accompanied with sharp, stinging and burning pains, and during the last six months, unpleasant quivering sensations. Hearing of the great success of Dr. Blake in curing Cancer, I was induced to apply to him. His operation only lasted ninety minutes, during which time the Cancer was entirely destroyed. I have had no pain or unpleasant sensations since the operation, and have been able to attend to my usual duties during the whole time. The cancer was about the size of a hen's egg. I had shown it to several physicians, all of whom pronounced it Cancer. It is now well.

Mrs. ELIZABETH ROFF.

From the Hunterdon Gazette.

DR. G. T. BLAKE.—This gentleman, who has attained a widespread and well-deserved reputation in the curing of Cancers and Cancerous Complaints, has removed from his former residence in New Germantown, in this county, to Elizabeth City, where he is practicing on a more extended scale than ever. There are many about here who are ready to certify (and have certified) to the virtues of the Doctor's remedies and practice, in this intricate and fearful form of disease. He has effected complete and radical cures in our immediate neighborhood, of cases which were supposed past recovery; and has still several on hand, which are rapidly improving. Personally, the Doctor is a most agreeable gentleman, and we rejoice at his merited success.

Reaville, Hunterdon Co., N. J.

DR. G. T. BLAKE—*Dear Sir*—At your request I give the history of one of your truly wonderful cures. My wife was afflicted with a cancer in the breast for about eight months—it had grown to the size of a hen's egg. By the application of your remedy it was entirely destroyed in two hours—and in six weeks entirely healed up.

Such facts as these should be published to the world, and it should be understood that there is a certain and easy cure for this dreadful disease, generally considered incurable. WILLIAM B. PRALL.

Plainfield, Essex Co., N. J.

This is to certify that I was afflicted with cancer on the side of my nose and upper lip for fourteen years. During the last few years it had become very painful, and was attended with burning, smarting, and itching sensations, which were, at times, almost unendurable. At other times it felt as though it was full of live insects in motion. Extreme heat or cold had a tendency to increase all the above sensations, so that I was unable to attend to my usual household duties. Several physicians had attempted to cure it, but did not succeed. The cancer at this time was about the size of a silver dollar. I was fearful it was past cure, and was very much discouraged. Under these circumstances, I employed Dr. G. T. Blake, who applied his medicine for sixty minutes, at the expiration of this time the cancer had become perfectly dead, and turned black. I have had no pain, itching, smarting, burning, or quivering sensations in it since. It came out in about ten days from the operation, and was entirely healed up in three weeks. I am now well and able to attend to my usual duties. You have the privilege of using this certificate any way you please to relieve the suffering.

Mrs. R. HAZEN.

Philadelphia, February 15, 1858.

This certifies that Dr. George T. Blake, removed a large wen from the head of the subscriber, in forty minutes, without any pain. There was only a slight warm sensation. I would recommend his mode of treatment in preference to any in my knowledge, as there is no fear of the knife and no loss of blood. THO. H. ALLEN,
N. W. corner Pine and 5th Sts.

I hope the above certificate will be satisfactory to all who are afflicted with wens or tumors of any kind, and induce them to adopt our mode of treatment, as we believe it to be the only rational treatment, especially for those who object to the frightful pain which is caused by the use of the knife. Erysipelas, which frequently follows the use of the knife, with all its fearful results, has never attended this treatment. I have removed four wens from the head of a lady in a few minutes, without any unpleasant sensation, only a slight warmth, such as Mr. Allen speaks of in the above certificate.

The following is one of the most remarkable cases on record—it being now nearly two years since the operation. I heard from him yesterday. He is now entirely well:—

Easton, January 16, 1857.

DR. G. T. BLAKE,—*Dear Sir*:—In justice to yourself, and that all who may be afflicted with cancers may know where they can be cured, I have concluded to inform you of the apparent success of your treatment in my case, the particulars of which are as follows:—

For twenty years past, I have been afflicted with a cancer on the right side of my face, near the inner angle of the eye; for a long time I paid but little attention to it, but its growth being steady, and the pain becoming more severe, I commenced using remedies for its cure about fifteen years since, but all seemed of no avail. During the last five years I have repeatedly had it burned, but it always grew again, and in fact seemed to grow much faster after every burning operation. The pain increased until it became almost unendurable; for years I was not able to sleep more than two or three hours a night, and many nights did not sleep at all.

I had finally given up all hopes of having a cure performed, and made up my mind to be eaten up alive—as I cannot compare the sensation that I experienced to anything nearer—as if it were filled with creeping and eating insects continually in motion.

When in May last my son got possession of one of your printed circulars, and after reading many of the testimonials (a number of which were from persons with whom he was acquainted), he prevailed on me to give your remedy a trial. You are aware of the operation that I underwent, and will excuse me when I say that it was a very painful one, but of all this you had the frankness to inform me before you commenced. Nor could I have expected it otherwise, as my face was sore at the time—I could not bear the slightest touch upon it, and the cancer had grown from the under eyelid to the point of the nose, covering at least half of my cheek. The operation lasted an hour, and I being an old man, felt very much debilitated after the performance, but after arriving at home I lay down in bed, and for the first time in my recollection for ten years, slept soundly all night.

From that day, it being now seven months, I have not experienced the least cancer pain. My face has been gradually healing, and bids fair to become completely healed. Having

lived seventy years, and the last twenty in great distress, I am truly grateful at the prospect of spending the rest of my days in comfort. You are at liberty to refer to me all who may doubt the efficiency of your remedy, and I will cheerfully tell them how I felt seven months ago and how I feel now.

Truly and gratefully, I am,

M. H. HORN.

The following is from one of the oldest practitioners of Medicine and Surgery in the city of New York :—

To GEORGE T. BLAKE, M. D., }
Elizabeth, N. J.

Dear Sir :—I take pleasure in bearing testimony to your treatment of cases of cancer : having watched many cases under the operation of your remedies, I feel justified in affirming that you possess the secret of a rapid, radical, and permanent cure. Your remedy is safe in its application, prompt and uniform in its action, reliable and permanent in its results. It leaves nothing to be desired by those who seek relief from this dreadful malady.

All former remedies, to my knowledge, have been experiments—and generally very cruel ones—rather than scientific competency proceeding upon a fixed principle and formula to a fixed and determined end. Even in the best cancer remedies known heretofore, the issue was always involved in more or less of doubt ; and when after forty or fifty days of terrible physical suffering (equivalent to ordinary years in their exhausting action on the nerves)—when, after this terrible ordeal, the semblance of a cure had been obtained, we were always left in doubt as to whether, or how soon, there would be a relapse ; and even when the malady received a vigorous check, it was at the cost of implanting poisons in the system, which would most probably give trouble, almost equal with the original evil, in some other shape, and before many months were over.

In thus referring to the ill success of other remedies, I do so in no captious spirit—though free to confess that they have often and sadly disappointed me ; but recalling the sad results of what has been done before me in this department, I am the more inclined to admire and bear witness to the perfection and reliability of your present discovery.

With assurance that, in the discharge of my duty, I shall send all sufferers from cancer who may fall within my sphere to obtain the relief which you alone (so far as my knowledge goes)

can furnish, I have the honor to remain your very obedient servant,
E. WHITNEY, M. D.

The following is from Dr. J. Green, of this town, who is engaged in an extensive practice, and well acquainted with the various modes of treating cancer, having been in the practice of medicine for the last twenty years :—

Elizabeth, New Jersey, July 28th, 1857.

The subscriber having been acquainted with Dr. Blake, and also with his treatment of cancers, for a long time, would unhesitatingly recommend his mode of treatment of that fearful disease, in preference to any of the numerous modes known to the Medical Profession.

I have witnessed Dr. Blake's operations several times, all of which were perfectly successful and satisfactory to all concerned. This remedy will, in all probability, be the only one used in the treatment of cancers, five or ten years hence, as it combines all the advantages, and none of the disadvantages, of all other modes of treatment.

Therefore it removes all objections urged by the fraternity. I hope the Medical Profession will not treat the remedy with neglect, but give it a liberal patronage, for it has *merits* which are worthy of the attention and patronage of all.

JAMES GREEN, M. D.

Flemington, N. J., July 23d, 1857.

DR. BLAKE,—*Dear Sir* :—Thinking perhaps it might be a benefit to my fellow men afflicted with cancer, I testify to what you have done for me.

About two years ago I had something growing on my hand, which I showed to a dozen or more Physicians. They pronounced it cancerous, and advised me to have it removed. I am happy in testifying to the completeness of your remedy, as it gave me no pain whilst it was being applied, which was forty minutes. It is now over one year since the operation, and there is no return of the disease.

GEO. F. CRATER.

Beekman's Mills, N. J. July 23d, 1857.

This certifies that I had a cancer on my under lip the size of a hazle nut, which was quite painful. It had been growing seven months. Dr. Blake removed it with very little pain, and it is now quite well.

JOHN HERDER.

Brooklyn, July 29th, 1857.

DR. BLAKE,—*Dear Sir* :—I take this opportunity to express my gratitude to you, for the removal of that very bad birth-mark from the breast of my infant child.

Your remedy was only twenty-five minutes in removing it. The first ten minutes my child cried a little, the last fifteen she slept, and was perfectly free from pain.

A cure had been attempted by our family Physician before we called on you, by plunging fifty white hot needles into the diseased mass, which only aggravated the trouble, and caused my child a great deal of pain. It is now perfectly well. The mark was about the size of a silver dollar, of a dark purple color, and very much swollen at times.

It was rapidly increasing in size when I applied to you, therefore we determined to have it removed as soon as possible.

MRS. EDWIN HOLLALY.

Brooklyn, Long Island, July 29th, 1857.

For the benefit of those afflicted I give the following certificate :—

I had a cancer on my back one foot in circumference ; it protruded at one point about two inches, and was of a dark red or purple color.

Last fall it commenced troubling me very much, so that I gave up business and put myself under the care of Dr. Blake. At this time many of my relatives and friends thought I could never be cured. I am happy now in being able to state that my cancer is perfectly well, and I am again engaged in active business.

Eight or ten Physicians were present and witnessed Dr. B.'s operations. All were highly pleased and favorably disappointed in the result. This was considered a very remarkable cure by all who had knowledge of it. I will cheerfully give any one information who wishes it, in regard to Dr. Blake or his treatment of cancers.

CHARLES TAYLOR.

Place of Business—No. 1 Erie Place, N. Y.

House—Atlantic Avenue, 3d door from Hampden st., Brooklyn

The following is from Peter J. Clark, a well-known Lawyer, residing in Flemington, New Jersey :

This may certify that Geo. T. Blake, M. D., of New Germantown, Hunterdon Co., N. J., is a graduate of the University of the City of New York, and that he has been very successful in the treatment and cure of Cancers, by the application of a remedy which is safe and rapid in its effects, and attended with little pain.

I would further state that Dr. Blake is a gentleman of intellectual attainments, practical, professional experience, and of high moral character.

PETER J. CLARK.

Flemington, Nov. 24th, 1855.

From J. F. Dumont, Attorney, of Hunterdon Co., N. J. :

This is to certify that I am well and intimately acquainted with Dr. Blake; have known him ever since he has been a resident of New Jersey. That as a scientific and skillful Physician, he has but few, if any superiors in New Jersey. He is a graduate of the New York University of Medicine, and a licentiate of the State Medical Society, of New Jersey; that he is extensively patronized in his profession. I know him to be a high-minded, talented, and gentlemanly man, worthy of the excellent reputation he enjoys.

I may also say that I have witnessed some of his operations for the cure of Cancer, which were truly wonderful, killing the Cancer in a few minutes, simply by applying the remedy to the parts affected, causing little or no pain. One of those operated upon said that the sensation produced by the remedy was like that caused by a sunburn. Two operations, Mrs. Gioff's and J. S. Smith's, which I witnessed, were performed in thirty minutes; after which I saw Dr. Blake take an instrument and pass it through the parts, causing no pain to the patient.

I saw, also, an operation performed upon Mrs. Fulper, of Flemington, N. J., which lasted about forty minutes. The excrescence or cancerous lump was about the size of a large pea, upon the upper lip. After this operation, the Doctor passed an instrument through the Cancer, and in the centre there was a jet of matter. From appearances, it must, in a short time, have been a running Cancer. Mrs. Fulper stated, at the time of the operation, that it had been painful at times previous to the operation.

All of these persons were well of the operation in from four to five weeks. These cases are a few of the many persons that I know him to have cured. Dr. Blake's Remedy is entirely free from the great objections urged by Physicians generally, which are the great pain occasioned by the use of pretty nearly all the Cancer remedies

of the day, and the length of time taken to perform the cure. He cures them quickly and without pain or inconvenience to the patient.

J. F. DUMONT.

Flemington, Nov. 12th, 1855.

New Germantown, Hunterdon Co., N. J., Oct. 25th, 1855.

The subscriber has been acquainted with Dr. Blake the past three or four years, and employed him as family Physician during that time. Has also known of his operations on many Cancers, all of which have been perfectly successful in producing speedy cures. Dr. Blake's Remedy has the reputation of being one of the most important discoveries of the age, and I believe is considered so by most of his neighboring physicians, who send him many patients. Any communication in relation to Dr. Blake, or his Cancer Remedy, will receive prompt reply.

JOHN P. S. MILLER,

Post Master.

Browerville, Harrison, Ohio, Feb. 6, 1858.

In October, 1856, I was taken with a disease in the right cheek, which caused me much suffering for some eight months.

In the mean while I submitted to several surgical operations, without any beneficial results. It still grew worse.

In September, 1857, I went to Philadelphia; while there I had another operation, and syringed my cheek three times a day. I stopped at the Union Hotel. Dr. Blake was there at the same time. Having been introduced to him, I was invited to his room.

After an examination by the Dr., he informed me that he had a medicine which would cure my cheek without any surgical operation. I accordingly took one bottle home with me, and by its use my cheek is now entirely cured. I would say to all who may be afflicted with cancerous or scrofulous diseases, to try his remedy, with the assurance of a speedy cure.

Yours, with respect,

CHARLES MCKEAN.

I would say to those who wish information of me in relation to Cancers or Cancerous Complaints, that all communications will be promptly attended to, and all advice, whether by letter or otherwise, will be free of charge.

G. T. BLAKE,

575 BROADWAY, N. Y.

PLEASE HAND TO YOUR NEIGHBOR.

NEWTON ON CANCERS.

THE following remarks are taken from the Western Medical News, edited and published by Prof. Newton :

"It has required many years of careful attention and success in this branch of the profession, to warrant me in making this public announcement; but with this, as with all other malignant diseases, it requires years to test their radical cure, and the treatment pursued has stood the test for years. The curability of this disease is as fully established as that of any other which man is heir to.

"I am decidedly opposed to the old, threadbare opinion taught by the medical schools for ages past, and adopted by their disciples as authority, without ever investigating the subject for themselves, that cancer is primarily a constitutional disease. I am fully satisfied that the disease has a local cause for its origin, which I conceive to be entozoa, or cancerous animalcula (which fact I made known to the public some six years ago,) and that it becomes a constitutional disease only when these animalcula become sufficiently developed and strong enough to overcome the natural resisting action of the system. They have an inherent tendency to eat up or destroy contiguous parts. * * * As a general thing, the powers of the system are not destroyed for some time. As this disease is clearly a local one, dependent on these animalcula, it should be treated by local applications, such as will kill entozoa,—body and roots or branches—these being the reproducing cause when the *knife* is used. By the suppurative process which is brought about, the entire action of the parts is changed. By this method the disease may be radically cured.

"We frequently hear medical men say, if cancer is a local disease why can it not be cured with the knife? and that the idea of these cancers having roots or fibres, is speculative. There is no speculation about it, and the reason that nearly every case fails to be cured where the knife alone is depended on, is because these roots or fibres are not reached by it, and they remain as germs for reproduction. Sir Astley Cooper is of the opinion above expressed: 'When

you dissect a schirrus tumor, you will see a number of roots proceeding to a considerable distance.' "

As to the cause or origin of the "cancer animalcula" themselves, it is a fact, observes Prof. N., in conclusion, that the "decomposition of organic bodies always gives rise to the production of other organic bodies, whose particular form and character depend on the greater or less rapidity with which the decomposition progresses, as well as upon the particular constituents of the substance undergoing decomposition.

"We have long maintained that cancerous animalcula owe their origin to a gradual decomposition of certain parts where obstructions occur in consequence of blows, long-continued pressure, and, indeed, from any cause which produces the necessary degree of obstruction. A large majority of cancers can be usually traced, by patients, to blows received sometime previous to their manifestation. Others cannot be satisfactorily traced to any cause. However, we usually find them in places where the rim of a hat presses upon the forehead, where a garter or boot presses upon the leg, a pipe or cigar upon the lip or tongue, or where a hat or cap string rests upon the ear; also upon the eyes, nose, cheeks, breasts, or other parts, where blows are likely to have been received. In any situation they are the result of an obstruction which causes a gradual decomposition of the surrounding parts, and from which decomposition originate the cancer animalcula. And the formation and generation of these animalcula are almost always observed by patients long before they are aware of the presence of cancer—their action upon the nerves of the parts producing an impression as if a hair, or something similar, was irritating or tickling them, and which the patient often endeavors to rub or brush off.

Dr. B. gives particular attention to the treatment of the following diseases—Scrofula in all its forms—Rickets—Fistulas—Abscesses and Tumors of all kinds as well as Cancer—combining constitutional with local treatment—thus seeking to eradicate the virus from the system, as well as cure the local disease. Dr. B. may be consulted at his office, 575 Broadway, from 10 A. M. to 3 P. M. daily.

Cancer Cured Without the Knife.

READ THE TESTIMONY

OF THE REV. MR. WOOD, AS GIVEN BELOW.

Philadelphia, August 5th, 1857.

My Dear Sir :

* * * * *

While attending the Commencement Exercises of La Fayette College, in Easton, last week, I was introduced to Melchior Horn, who was cured by Dr. Blake, about eighteen months since, of a painful and loathsome Cancer of more than twenty years standing.

Its locality was the right side of the face. It gradually grew in size until it had spread over the greater part of the face, eating away nearly one half of the nose, extending up to and destroying a part of the eyelid, and causing so much suffering that, to use his own words, he had "to walk the floor night after night for years." This Cancer was so loathsome and offensive that his presence was often insufferable. His meals, for the same reason, were taken alone. In this condition, after he had tried the usual remedies in vain, he was induced, although nearly eighty years old, to try your Remedy. He accordingly repaired to New Germantown to Dr. Blake. The case was considered by even the Doctor as a doubtful one, so far had the malady progressed in its work of destruction. But at the earnest request of Mr. Horn, whose hope was to be relieved of his suffering, rather than to be effectually cured of the disease, the Doctor applied his Remedy. The result is a complete, permanent cure. As the old man sat in his "old arm-chair," reciting his painful experience, and telling how successful the Doctor had been, his eyes filled, his hoary head shook, and raising both hands from his chair, exclaimed with grateful emotions, "Tell the Doctor I am cured—that I have no pain—that I sleep as soundly as ever—have a good appetite. Tell him to send me a large number of his pamphlets, I want to send them to the four quarters of the earth," and, continued the old man, "if you, Sir, have any friends, or even enemies, suffering from Cancer, send them without delay to Dr. Blake.

Yours,

CHARLES WOOD.

The following is the opinion and recommendation of several liberal-minded Physicians, now engaged in active practice in the city of Brooklyn.

G. T. B.

We, the undersigned Physicians practising at the places below stated, are acquainted with Dr. G. T. Blake, and know him to be a thoroughly educated Physician, honorable and gentlemanly in his conduct and deportment, and having on a number of occasions witnessed the application of his Cancer Remedy, and closely observed its operation throughout the treatment, and also having satisfied ourselves of its thoroughly curing the disease, we have the utmost confidence in it as being superior to any other mode of treating these painful affections.

The comparative absence of pain while under the influence of the Remedy, together with the quickness of its operation, greatly favors its use, as in its effects there is no great shock to the nervous system, which in many instances might be a fatal objection, especially to those who are in a debilitated condition. In view of its many merits over other modes of treatment, we would unhesitatingly recommend Dr. B.'s Remedy to all those who are afflicted with Cancers, Tumors, Wens, Moles, Birth Marks, Lupus, &c.

D. E. SMITH, M.D., 140 York st., Brooklyn.

WM. W. HADLEY, M.D., cor. 3d and South 1st streets, Brooklyn,
E.D., former Prof. of Materia Med. and Therapeutics in the
Central Med. College, Rochester, N.Y.

HERBERT FEARN, M.D., 84 Meddagh st., Brooklyn.

K. E. FIRTH, M.D., 128 Gold st., Brooklyn.

D. WILCOCKS, M.D., 146 York st., Brooklyn.

J. W. FRISBIE, M.D., 124 Willoughby st., Brooklyn.

Brooklyn, Long Island, July 10, 1857.

The following certificate is from Rev. J. Kirkpatrick, one of the oldest Presbyterian Clergymen in the State, who lives at Ringoes, Hunterdon county, New Jersey:—

Ringoes, N. J., May, 1857.

DR. G. T. BLAKE—*Dear Sir*:—I have thought it perhaps might be my duty to add my testimony to that of others, with regard to,—shall I say your wondrous cure of that something in the human system called Cancer. I have not seen the operation performed, but have seen two persons that have been operated upon. The one a lady, upon whom you operated about one year since. The Cancer in her breast, as she told me, was the size of a hen's egg. She said it was taken out with little or no pain, and it healed up in a few weeks, and now to appearance is entirely sound and well.

The other, a gentleman, whom I saw immediately after the operation, and have often seen since. A person, and that one who has often been applied to for cures in such cases, the language of that person was,—“I saw the patient under the operation, and I asked him if it was painful, he said that it felt as he had often felt the sun upon his bare arm, and no more painful, and in half an hour,” was the remark, “that he sat before me, it had eaten the cancer out. And now if hereafter I am applied to in such cases, I must send them to Dr. Blake, for I cannot do it without causing much pain.” I am led, dear Sir, to believe it is a complete remedy, and I wish you great success in its application.

Yours as ever,

J. KIRKPATRICK
